transcosmos develops GenAI-powered chatbot T-GPT in South Korea

Custom chatbot integrating ChatGPT conversational ability and transcosmos's technical capabilities

* **“T-GPT” is now called “trans-AI Chat.”**

transcosmos inc. (Representative Director, Co-presidents: Masaaki Muta, Takeshi Kamiya) hereby announces that the company has developed and released T-GPT, a chatbot service powered by generative AI (GenAI) in the Republic of Korea (South Korea).

T-GPT is a chatbot service that combines transcosmos's advanced technical capabilities and Chat GPT's ability to engage in natural language conversation. With this service, businesses can promptly respond to user inquiries 24/7, from anywhere, at any time. transcosmos designed and developed the service, focusing on making AI-powered conversational chatbots that come with the ability to understand context and serve customers in natural language. T-GPT can not only provide the optimal response to user inquiries, but also can trace back user's past inquiry history and offer the right response based on the context.

T-GPT can provide solutions to user inquiries in many different ways, and has the ability to respond in users' preferred language without building a database for each language. Based on the nature and type of inquiries, T-GPT presents solutions in an optimum form, not only in text, but also with charts, images, videos, and more. Moreover, the service comes with a range of features. Just to give an example, for users who are looking for location information, T-GPT navigates the users to the location or helps them find maps and best keywords for search, utilizing both mobile and webchat.

To assist clients in developing their own GPT Chatbot services specifically designed to meet their user needs, transcosmos experts help the development process. The company's support does not stop there. To help clients boost service competitiveness, transcosmos provides consulting services on analytics and statistics, enabling clients to make the most of their GPT Chatbot. What's more, its standardized services also help clients minimize initial burdens for server implementation and technical design.

By growing its AI business, transcosmos will further refine its conversational chatbot, T-GPT, by connecting the chatbots to live-chat agents, developing APIs for connecting T-GPT with chat platforms, and more. Ultimately, transcosmos will design and provide GPT features optimized to meet each client's needs.

With around 10,000 people, transcosmos Korea is empowering more than 350 clients in Korea with its business process outsourcing (BPO) services specifically optimized for each industry. The services include IT solutions development, e-commerce, digital marketing, field services (FS), management of lifelong learning institutes and education consulting, contact center opening and management, direct mail (postal delivery), omnichannel system development and management (mobile, e-mail, postal delivery), and more. Offering optimum services for each individual client across industries and sectors, transcosmos Korea helps clients optimize costs and boost sales, productivity and customer satisfaction (CS).
